## **DETAILED ACTION**

## Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 1-12 and 18-22, drawn to synthetic tetrapeptide or mimetic, classified in class 530, subclass 330.
  - II. Claims 13-17, drawn to a method of stimulating apoptosis, classified in class 514, subclass 18.
  - III. Claims 23-25, drawn to a method of making a drug suitable for treating cell proliferative disease in a mammal by promoting apoptosis in proliferatively diseased cells which includes an assay for apoptosis-inducing activity, classified in class 435, subclass 4.
  - IV. Claims 26-32, drawn to a method of screening for a compound that binds IAP, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of

Application/Control Number: 09/965,967 Page 3

**Art Unit: 1653** 

using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as in an assay for IAP.

- 3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the tetrapeptides of Group I and the method of making a drug of Group III do not require each other for their practice since the method is not limited to making peptides; have separate utilities, are physically, chemically and biologically different from each other; and are subject to separate manufacture and sale from each other. These groups have acquired separate status in the art and separate fields of search as further evidenced by their separate classification.
- 4. Inventions I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product such as a carbohydrate that binds IAP.
- 5. Inventions II, III and IV are unrelated. Inventions are unrelated if it can be shown

Application/Control Number: 09/965,967

Art Unit: 1653

that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method of stimulating apoptosis of Group II, the method of making a drug of Group III and the method of screening for a compound that binds IAP of group IV do not require each other for their practice, have separate utilities, are physically, chemically and biologically different from each other; and are subject to separate manufacture and sale from each other. These groups have acquired separate status in the art and separate fields of search as further evidenced by their separate classification.

- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 7. A telephone call was made to Janet Reed, the attorney of record, on May 25, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made. Ms. Reed informed Examiner that the instant application had been transferred to Raymond Miller of Pepper Hamilton in Pittsburgh. A call was made to Mr. Miller's office and Examiner was informed that they were working on a power of attorney. No such power of attorney has been received by the Office as of June 24, 2004; thus, this Office action is being mailed to the attorney of record.

Application/Control Number: 09/965,967

**Art Unit: 1653** 

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert A. Wax whose telephone number is (571) 272-0623. The examiner can normally be reached on Monday through Friday, between 9:00 AM and 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jon P. Weber can be reached on (571) 272-0925. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
